Installing Apache 2.0, PHP 4.2.0, MySQL 3.23, and PHPMyAdmin

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This article attempts to detail the installation of the Apache 2.0 web server, the PHP version 4.2.0 scripting language, the latest MySQL DBMS, and PHPMyAdmin on a windows (98, ME, XP, etc) desktop. Although there are a couple of programs that will do the installation of all these for you - the knowledge gained from setting these items up yourself far outweighs any time saved with the auto-install programs. This article focuses on what a Flash Developer will need to set up a dynamic working environment for Flash authoring.
