

Internal E-mail System

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This application was developed for a intranet project, and would be useful for any small to medium sized organisation who use a Windows NT Server, or even just a Networked Windows 95 solution running the personal web server, and who want an e-mail system, but don't want the associated costs. This system could also be used for a community based website, as to allow members only to send email to other members. The system uses a MS Access database to store the user details and messages, but could be easily upsized to a SQL Server.
