Intranet News System

Address   {value_address}

Contact Person   {value_contact_person}

Mobile Number   {value_mobile_number}

Email   {value_email}

The Intranet News System was designed for an Intranet for people in their various departments to be able to update the news on their web pages without e-mailing the news admin to do it for them. The admin system allows you to add/edit/delete users, add their table to the Access 2000 database, and maintain security for user news editing. It also will e-mail forgotten passwords using CDONTS or JMail, and the text is formatted with one .CSS file for easy customization. The user management system is a modified version of Asp Client Check. Edit the config files, and you're ready to create users who can post news. Edit their news include file, and they are off and running, leaving you to do more fun things rather than update their department web page.
