Introduction to Classes in C++

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

To create more advanced and complete objects, C++ allows you to group these identifiers and create Classes. We will cover how to Define & declare a class, initialize a class, its constructors and destroctors, class member functions & private functions and finally how to declare objects from a class.
