Email	{value_email}

You can use this calculator to see how hypothetical investment can grow over the time. For example check out what will happen after 300 months (that's 25 years) if you invest \$250 per month in stock with average return of just 1% per month. You may be surprised by the result. Version 2.0 is fully reworked and now the resulting table is more clear and shows more useful information.
