Investment Guard

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This software makes use of a very special Apache handler that allows it to monitor every user that enters your members area as well as every file request made from your members area all in real time. This script replaces Browser based Basic Access validation with a more secure version of user tracking and validation of its own. Users login via a form instead of the browser pop-up box. The script has three main functions. 1. Prevent password theft. It is impossible to run a brute force password attack against your members area. 2. Prevents password abuse. Ensures that only one person is using a given username. 3. Prevents bandwidth abuse and robot downloading of your members area overnight. No other script like it on the market. Tons of features and a user interface.
