

# IP2Location Python Library

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

IP2Location Python Library is used to utilize all of the IP2Location database products. This API is meant to allow easy integration between your program written in Python and the IP2Location Binary (.BIN) data file which will allow you to query the data for information like Country, Region, City, ISP, Latitude, Longitude, Domain, ZIP code, Time zone, ISP, Domain name, Connection type, Area Code and Weather station code. It has been optimized for speed and memory utilization. Developers can use the API to query all IP2Location binary databases for applications written in Python. Get more geolocation information at <http://www.ip2location.com> .
