ipMonitor is a network monitoring, alerting and recovery software that IT professionals and ISPs/ASPs depend on to ensure quality of service and network uptime, around-the-clock. ipMonitor uses 42 monitor types to test the availability and responsiveness of network resources at the protocol and transaction levels. In the event of a problem, ipMonitor will attempt to solve it by restarting failed services, rebooting machines, initiating recovery scripts, or executing 3rd party recovery applications. With a diverse array of notification methods, comprehensive reporting abilities, and licensing of unlimited resources, ipMonitor is ideal for mission-critical eCommerce and eBusiness installations.
