Mobile Number	{value_mobile_number}
Email	{value_email}

iSearch is a tool for allowing visitors to a website to perform a search on the contents of the site. Unlike some other such tools the spidering engine is written in PHP, so it does not require binaries to be run on the server. META tags are supported, such as description, keywords and robots. iSearch performs result scoring, placing the highest ranking matches first. Works fine in PHP safe mode. Auto Spider feature keeps your index up-to-date without relying on cron jobs. Multi-language and style sheets for search results.
