J2Native is the software development kit for working with native code from any Java application without using Java Native Interface (JNI) technology. While using J2Native you do not have to create native code libraries or deal with native code at all. You can call functions from any dynamic library or use system API without necessity to waste time on studying JNI. We understand that the performance of the product is important for our customers and we are proud that we have created the product that meets your expectations. It also should be admitted that while increasing the speed of its work we managed to preserve its reliability and convenience in usage. And we still continue to improve the product paying special attention to the demands of our customers we are constantly in touch with.
