Jas CMS is a free, small website engine written in Java, licensed under GNU GPL 3. It produces static content without the need of any databases or server-side scripting languages. It is created to fulfil high security concerns. You can use it with any webserver which is capable of serving static files. It is also designed for managing content projects / websites in the i2p network, tor et cetera. It is also suitable for various kind of content projects like personal websites, project / product pages, group sites, company websites...
