Tuning isn't always about speed, sometimes other aspects of the application need fixing. When your application needs tuning, your first course of action is normally to monitor the application with a profiler. But profiling is not always practical -- sometimes for ironic reasons. In this installment of Eye on performance, Jack Shirazi and Kirk Pepperdine, Director and CTO of Java Performance Tuning relate their recent experiences with profiling a fat client -- so fat, in fact, that it left no room for a profiler.
