

JET Code Generator

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

The JET Code Generator connects to any JDBC based database and exports the schema as an XML formatted file. The user is free to write/modify XSLTs to generate virtually any type of source code from the XML representing your database schema. Then generates code based on XSL Transformations. A complete example is included; with a database, support classes, XSL Transformations, build scripts (ANT, and batch).
