Email	{value_email}

JFTP is a cross-platform graphical FTP client that provides an easy point-and-click interface to FTP servers on the Internet or intranets. JFTP runs on any platform that supports Java 1.1, and has been tested on Windows 95, 98, NT 4.0, Linux, MacOS and Sparc and Intel Solaris platforms, connecting to NT and UNIX based FTP servers. JFTP lets you "Quick Connect" to an FTP server for a one-time exchange. JFTP also maintains a mini-database of your favorite FTP sites, optionally saving your username, password, optional account, and local / remote starting directories. Easily create new connections, or delete unused ones in a friendly Connection Manager dialog. JFTP connections can be configured to work through an FTP proxy server.
