<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Spambots harvest your site for email addresses. One way to stop this type of abuse is to feed the harvesters invalid email addresses. This script creates invalid email addresses. It also creates links back to the original script, trapping the spambot into harvesting hundreds of invalid email addresses. It is recommended that you create a robots.txt file to prevent innocent search engines from indexing this content.
