

jQuery Menu Plugin Style 07

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This is a powerful jQuery component to build easily a multilevel rollover menu in an intuitive way! This plugin creates an accordion menu. It works with nested lists, definition lists, or just nested divs. Options are available to specify the structure, if necessary, the active element (to display at first) and to customize animations. You can add as many submenus as you want. For users without javascript, it falls back on a CSS menu system.
