

JS Merge XML

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This class can merge XML documents from strings, DOM objects or input files. It can take a XML document from a string or a DOM object tree, or a file taken from a form input and merges with another XML document. The resulting document can be search using a XPath query string or returned as a string or a DOM object. This object provides options to control whether the nodes with the same path or name are replaced or added sequentially.
