

JSearch Applet

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

JSearch applet can be used together with JSMenu applet or as standalone site search tool. It can search through the site tree-shaped contents or in some index files (or via CGI) for keywords ("all words", "any word" and "phrase" options are available). You can provide one or more index files simultaneously to search into (like "complete archive", "old archive", "new archive" etc.).
