

jshare

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Replace the long list of sharing buttons on your webpage and add jshare to take its place. It will be neat, simple and organized. This script uses the jQuery framework and works completely client side. So you can use it on static and dynamic webpages. The email form needs php support but you can disable the form by setting email form option to false in jshare settings. jshare is so easy to use and you only need to add a single simple code and include two files for it to work. The css file will be automatically add if you use jshare. Supports facebook, twitter, digg, delicious, yahoo, email, fav, print, live, stumbleupon, orkut, google, tumblr, linkedin, myspace, evernote, bebo, technorati, reddit, newsvine, mixx, netvibes, google buzz and you can add your own! You can also create your own sharing box and button designs using the included PSD files.
