jSNMP Enterprise provides application developers a cross-platform means of communicating with SNMP devices and services. It is written entirely in Java and is completely portable. jSNMP provides complete SNMPv1/v2c/v3 support including trap/inform handling and authentication and privacy password alteration. jSNMP has been optimized for minimizing network traffic and maximizing efficiency, allowing for a high degree of scalability. In addition, the package has been optimized for use with multiple simultaneous connections, allowing for a 3-tier model. To support a 3-tier model, jSNMP includes the tools necessary to create distributed network management applications using RMI and CORBA.
