

# JSP Form Action Page

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Most forms today store the user input into a database, but while there are many examples of building form pages or form action pages that echo or mail the input, I couldn't find a lot of examples of form action pages that store input into a database. This flash movie is for beginning JSP developer and attempts to explain the basic concepts involved in capturing and storing user input, a process that will be used in nearly every page you develop.
