

# jspListView

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Given parameters in a simple XML file, this listview presents columns of data fetched from any SQL database that may be scrolled or sorted by the user. The listview will transfer fields back to the calling page either by populating fields on a form, or through a querystring. The listview is presented to the client as standard HTML and JavaScript.
