

Keyword density checker PHP Script

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This PHP Script will allow you to (surprise!) check the keyword density of a website. Just enter a page and you will get a breakdown of single, double and triple word combinations and the keyword densities of them. Other features of the script: - Specify the minimum word length to consider - Specify the minimum number of occurrences - Include or exclude metatags - Built in stop word list - Image verification to prevent spamming
