Ruby on Rails Enterprise Application Development is a new book from Packt which helps readers to build a complete Ruby on Rails Business Application from start to finish. Written by Elliott Smith and Rob Nichols, this book concentrates on application development as a whole process and is intended to complement existing Rails tutorials. Each chapter deals with a key feature or functional area of a complex, full-scale Rails application. This book is aimed at developers who want to find out how to rapidly build easily-deployed, easily-supported business applications. It is for developers who have learned Ruby on Rails, probably from one of the tutorial books, and want to apply that knowledge to effectively build full, realistic applications.
