

# Linear Directory

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

this is mostly directory to array functions that read a directory, and converted it to an array, that in turn you have to read. This means looping through a directory's contents, saving it to an array (that takes up memory), then looping through the array again to read the directory contents!
