

# LinkController

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

This is a link checking system designed to minimise the amount of time spent dealing with broken links. It does not report the links as broken until some time after they are first identified (three tries over several days by default) so that there is time for links to be fixed. It then provides tools for easy and fast repair of the broken links.
