Links is an easy to use directory management program which allows you to run a complex link directory, without being overwhelmed by editing and updating HTML pages. It is modeled after Yahoo and inspired by The CGI Resources and contains all the necessary features to run a successful directory. Its Administrator Control Panel features: Full Database Control on both your category and your links databases, Build Static HTML Pages, Complete Customization with templates or with Perl code, Validating Links, and Simple Database Maintenance. End users can: Search on any field as well as general keyword with optional links to other search engine if the search fails, Add and Modify Links with email notification options, Subscribe to an email update newsletter which describes the latest Links to be added to the database, and "rate" links on a 1-10 sliding scale. A Top Rated report is automatically generated as well as a Top Votes.
