

# Liquid

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Liquid uses nothing but clientside XML, that runs directly in IE5x. No behaviours or customtags using namespaces, just simple tags. To develop a game like Pong, a few tags is all that is needed, just like with a hierarchical menu, a fixed navigation-box, or a context-menu, whatever you can imagine, it's just a tag away.
