LnkinLite Perl 5 CGI is a versatile free-to-use Hyperlink usage counter and redirect script. Simple Link Names and URLs added to the data file can also be edited via the Admin Page. The called script updates the counts and then redirects to the required URL. Any time you need to add one of the links to your pages, or send a copy to another site, admin will generate the correct hyperlink tag for a simple copy and paste action. MySQL not required.
