LockCrypt

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

LockCrypt is an easy to use database to guard your personal details. It offers a central location to manage your website passwords, accounts, contacts, credit cards and other sensitive data. LockCrypt includes a password generator to create passwords, and can export to CSV, XML or plain text files. It can also import from XML. Accounts can be sorted in to groups and assigned an icon to make them easier to find. Drag and drop is supported, as well as MySQL and flat file database support. LockCrypt uses AES encryption to protect the details you enter. This is regarded by the cryptography industry to be virtually unbreakable. There's also a mobile version of LockCrypt which runs on any J2ME capable device, allowing you to take your accounts database with you on the move. LockCrypt's Secure Clipboard protects any details you copy to the clipboard through the program, and Native translations into Czech, German and others are also available.
