LogCount cgi is a versatile FREE-to-use Unix web site counter script written for Perl 5. The counter script is not large, allows you to use your own images, and includes several handy features enabling it to control all the hit logging needs of most web sites. LogCount can also count with a time display, or show the time without counting. Also supplied is a separate basic log viewer, LogLook, which easily displays a colour coded track of each visitors page hits. LogCount can be called from an Image Source tag, a Hyperlink tag, or a Server Side Include tag. The latter allows you to 'include' the output as normal text on a web page if your server allows SSI calls. Efficient flat-files used, MySQL NOT required.
