

Login

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Make ASP generated web content available only to you! This is the ASP version of login.php. isLoggedIn() returns true if the cookies named UserName and PassWord are the same as the variables UserName and PassWord, the first 2 paramters of the function. If not, it displays the content of LogInPage, the 3rd parameter. Unlike the PHP counterpart, all parameters should be passed to this ASP version of isLoggedIn(), instead of ommitting LogInPage, you should pass "" an empty string.
