logMethods is a project/topic knowledge collecting and sharing tool for uses like knowledge management, activity logging, product/system descriptions, research journals, document tracking, etc. logMethods is designed for managing bits and pieces of information that is usually more suitable to be organized in hierarchical model. logMethods is very easy to use. It organizes data in the conventional folder-tree structure that most of the computer users are familiar with. logMethods could also be used as a analytical tool for ontology, semantic web research projects
