Magento Store Locator

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Customers can search for stores by either radius or specific area (city, state, zip code, etc.) and filter stores by tag for best accurate results. Google Map integrated helps Customers view map and get directions to store easily. We optimize the user interface to make it responsive and show extensive store details in the neatest way. Customers can use Facebook comments to interact with their preferable stores and others. Manipulated in backend, all stores can be set up quickly by importing files and assigning open time.
