mail2mysql

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

mail2mysql.pl is a script which reads a mailbox file, parses the messages and inserts them into a MySQL database. Written to send notices via e-mail and have them displayed on the web, this script monitors an e-mail box for messages, and when a message arrives it gets put into a database. The database entries are displayed on a webpage using PHP. Requires mhonarc, an e-mail to HTML converter, and MailTools module.
