

# MailFile

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

This script allows you to send multiple files by e-mail to someone requesting them from a web page. This script is based on Matt Wright's FormMail script. MailFile can send multiple files from the same form, there is no limit to the number of files a person can request. This script will send mail to the owner of the files telling them which files a person requested and any comments the requester had for the owner. If a person enters a bogusly formatted address or doesn't request any files they will get a message telling them that and to try again.
