

# MailListBot COM Edition

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

Email Enable your application or process. MailListBot is available as a COM object or EXE for integration with your ASP, VB, Java, or C++ application. Features include: Multiple file attachments, sending to an unlimited number of "To:", "CC:", or "BCC:" recipients by specifying a file containing a comma delimited list. Run in test mode: a great way to test the email addresses on your list for validity. MailListBot will connect to the mail server, and address your email to each recipient - the invalid emails show up on the screen and are put in the log file. MailListBot makes it easy for you to include in your own programs, HTML forms, or web applications. If you need mailing functionality in your own program MailListBot can fill the gap.
