

## Managing e-zines with JavaMail and XSLT, Part 2

<b>Address</b>	{value_address}
<b>Contact Person</b>	{value_contact_person}
<b>Mobile Number</b>	{value_mobile_number}
<b>Email</b>	{value_email}

This article demonstrates how to automate e-mail publishing chores with Java and XML. This concrete application of XML and XSLT describes an e-mail newsletter (e-zine) publishing application that outputs both HTML and plain text e-mail messages. Five reusable code samples include a Java program to send e-mails using JavaMail, an XSLT style sheet to convert the DocBook sample introduced in Part 1 to HTML, a Java configuration handler (in the form of a SAX ContentHandler), and the Java code that puts it all together in a multistep transformation.
