MaskURL

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

Home-users and small companies general current URL most likely looks like: http://www.provider.com/~ username/index.html. Needless to say, such a URL is difficult to remember and doesn't look nice. MaskURL offers you a way to run a Redirect URL Service that can be easy for surfers to remember and looks good! Members keep their current service provider and current URL, which will be the Target-URL. If your members run a site like: http://www.provider.com/~ username we could give you: http://run.to/user. They can choose any word they like or which best describes their site. MaskURL makes it so that when someone enters run.to/user in his or her browser he or she will automatically be redirected to your members site. Of course everybody can keep using members current URLs, but once they see the ease of your new Redirect URL Service, nobody will!!
