MediaLister is an Open Source PHP tool that allows you to expand a ZIP file of the MediaLister PHP system and then FTP the directory structure to your web site. Then, simply drop an FLV (Flash Video File) into the /medialister/ directory (included in the ZIP file) and update a simple XML metadata file (medialist.xml) that will, in turn, on demand, generate an HTML page that displays the Flash Video as a progressive web streamed video! Easy to use, update, and integrate into a web site (with simple knowledge of HTML code and CSS.) This allows you to customize the resulting video display page to your web site!
