MeetingPlace

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

This is a script to run a completely automated meeting / mini dating type site. The script encompasses all aspects of this particular type of site. While this type site is not new, we have added many features that make it unique.The script has full administrational controls as well as allowing users to upload pics and share messages via each users private message board. It allows for editing of user information at any time by users. It has 3 type of operation, one is a non member area, which allows for limited viewing of people info, the second is a free membership option that allows full access but can optionaly pop up a new window that asks the member to "donate". The third is (if donation mode is set by the admin) a "members who have donated" option where the members no longer see the annoying popup. This system currently uses PayPal for all donations, however I can script new modules as needed for any buyer.
