MiniShopper out-of-the-box is a small, highly efficient, robust shopping cart front-end coupled with a fully-featured order management system for its back-end. It is designed to be run from a single web page and (unmodified) does not support product categories. There is, however, a complete order processing system that supports multiple employees with different levels of access. This program can easily accomodate most payment gateways. Version 1.2 now supports the addition of "options" for products! NEW! Now you can add integration for AuthorizeNet, PayPal, and/or StormPay for only \$50 each! Add category support for only \$100!
