MobileDetect

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

If you are running a mobile site or intend to build one, you'll need at some point a mobile detection script that will tell you which phone is being used to visit your pages. MobileDetect not only tells you which phone is visiting your pages but also gives you details about the phone like which browser it's using, the screen resolution, supported languages, ... With MobileDetect you get the right data to help you building the most appropriate page for every mobile phone. MobileDetect is backed with a database containing detailed specifications of more than 3000 mobile phones. MobileDetect is a PHP package containing scripts with the following features: - mobile detection and retrieval of mobile phone specifications - mobile image resizing (banners, half banners or custom images) - mobile page templates - mobile scrolling text
