Mouse Gestures

Address {value_address}

Contact Person {value_contact_person}

Mobile Number {value_mobile_number}

Email {value_email}

Some web browsers have a feature called Mouse Gestures, which I've found to be great. Basically it is shortcuts that are activated with a motion you make while holding down the mouse button. I've gotten so used to them, that when using other programs I find myself using them. Since not many web browsers support this nifty feature, I wrote one in Javascript that can be added to any website to enable mouse gestures.
