Multiple File Search and Replace

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

When you are developing or supporting a large website, containing many pages and complex code, it is often necessary to make changes in several files simultaneously, in order to add new text or links to different pages, alter descriptions, keywords and other metatags, fix non-functioning links, redesign or optimize pages for search engines. For these purposes we have developed multiple file search, find and replace software tools.
