The "Multi-Warehouse" extension solves one of the main e-Commerce platforms problem is how to handle multiple ship from warehouses. The idea is that a store has either multiple warehouses (locations in particular), or they have more than one supplier that drops ships to customers. The Magento makes it possible to ship from a single location within a website and to manage global one-location inventory. On our side, "Multi-Warehouse" extends Magento in order to cover multi-warehouse sellers and resellers needs. The new version 1.1.0 of the 'Multi-Warehouse' Magento extension has a wide variety of features and options to configure multi depot performance and stock management in a desirable way. It provides global inventory control across multiple distribution centers/warehouses; different discounts/prices on the same item depending on the warehouse; and also many other functions to suit a wide range of retailers' needs. All updates released within 1 year are included free of charge.
