MyNewsGroups :) is a USENET news client with a completely Web-based interface. It is written in PHP4, and uses a database backend. Its main purpose is to mirror all messages from subscribed public newsgroups into a database, and add extra features such as saving articles per user, statistics on users, search functions, and so on. MyNewsGroups :) is aimed at people that have a Web site and want offer their users direct access to newsgroups of same subject.
