Mobile Number	{value_mobile_number}
Email	{value_email}

NetControl permanently monitors and analyses the network traffic and records all relevant parameters. This permanent supervision of the network enables you to react quickly to upcoming problems and allows to recognize sneaking changes. You can determine and record the access to and from external stations: (who uses your intranet, with which IP service, how much load was created, which stations were accessed). NetControl HTML data is ideal for accounting purposes or trend analysis. Alarms can be forwarded via E-mail or SMS. NetControl analyzes MAC-, IP-addresses and IP-services. Larger networks are supervised through distribution of up to 350 remote probes of various types (software, hardware or NetFlow). The software can handle up to 40,000 addresses. NetControl shows numerous "Top ten" (or Top 100) of different categories. Most active: stations, broadcast senders, connectionpairs, IP networks, IP services, external stations.
