

NetReport

Address	{value_address}
Contact Person	{value_contact_person}
Mobile Number	{value_mobile_number}
Email	{value_email}

If you are using devices which are capable of SNMP, then NetReport is the perfect tool for permanent network supervising and port based billing. Net report automatically finds devices with SNMP agents like switches, routers or printers. Then NetReport permanently requests port based measurements from these devices (load, collision, error rate, packet- broadcast- and multicast-traffic etc). It informs about configuration changes, fails or device resets and offers online generation of graphics and accounting data by web interface with detailed log reports. The Web-reports include: - a list with all active IP-Addresses on your network, showing the last time a watched element was available, - logs about new stations, the reset of stations, up and down of ports, - load, collisions and other reports from SNMP-Agents during the day, a report for changes of MAC and IP Addresses. NetReport combines the power of the successful RzK Address Wizard with SNMP and accounting functionality.
