Online web traffic analysis tool for multiple websites. The application comes with 2 versions: a light version that uses MS Access database - recommended for intranet environments or small websites, and a professional version that needs a SQL Server 7/2000 database engine and it's for tracking websites with heavy-traffic. It generates more than 30 charts and reports; beside the usuals (date/time, browsers, OS analysis), you have charts on global users distribution according to their timezone, per-country distribution, user's behavior within the pages of the site and many more. Also there is a downloadable wizard (.exe) for the users to quickly modify their pages and start using the web traffic application.
